What we will discuss today

- ▶ Tech Review
- ▶ What is CAPI?
- ▶ Why is CAPI?
- ▶ CAPI Anatomy
- ▶ Demo
- ▶ Getting Involved

Tech review: Kubernetes

Control Plane

- ▶ kube-apiserver
- ▶ etcd
- ▶ kube-scheduler
- ▶ kube-controller-manager
- ▶ cloud-controller-manager

Workers

- ▶ kubelet
- ▶ kube-proxy
- ▶ container runtime

Infrastructure Providers

- ▶ bare metal
- ▶ virtual machines
- ▶ networking
- ▶ storage
- ▶ containers?
- ▶ in-memory?!?

What is CAPI?

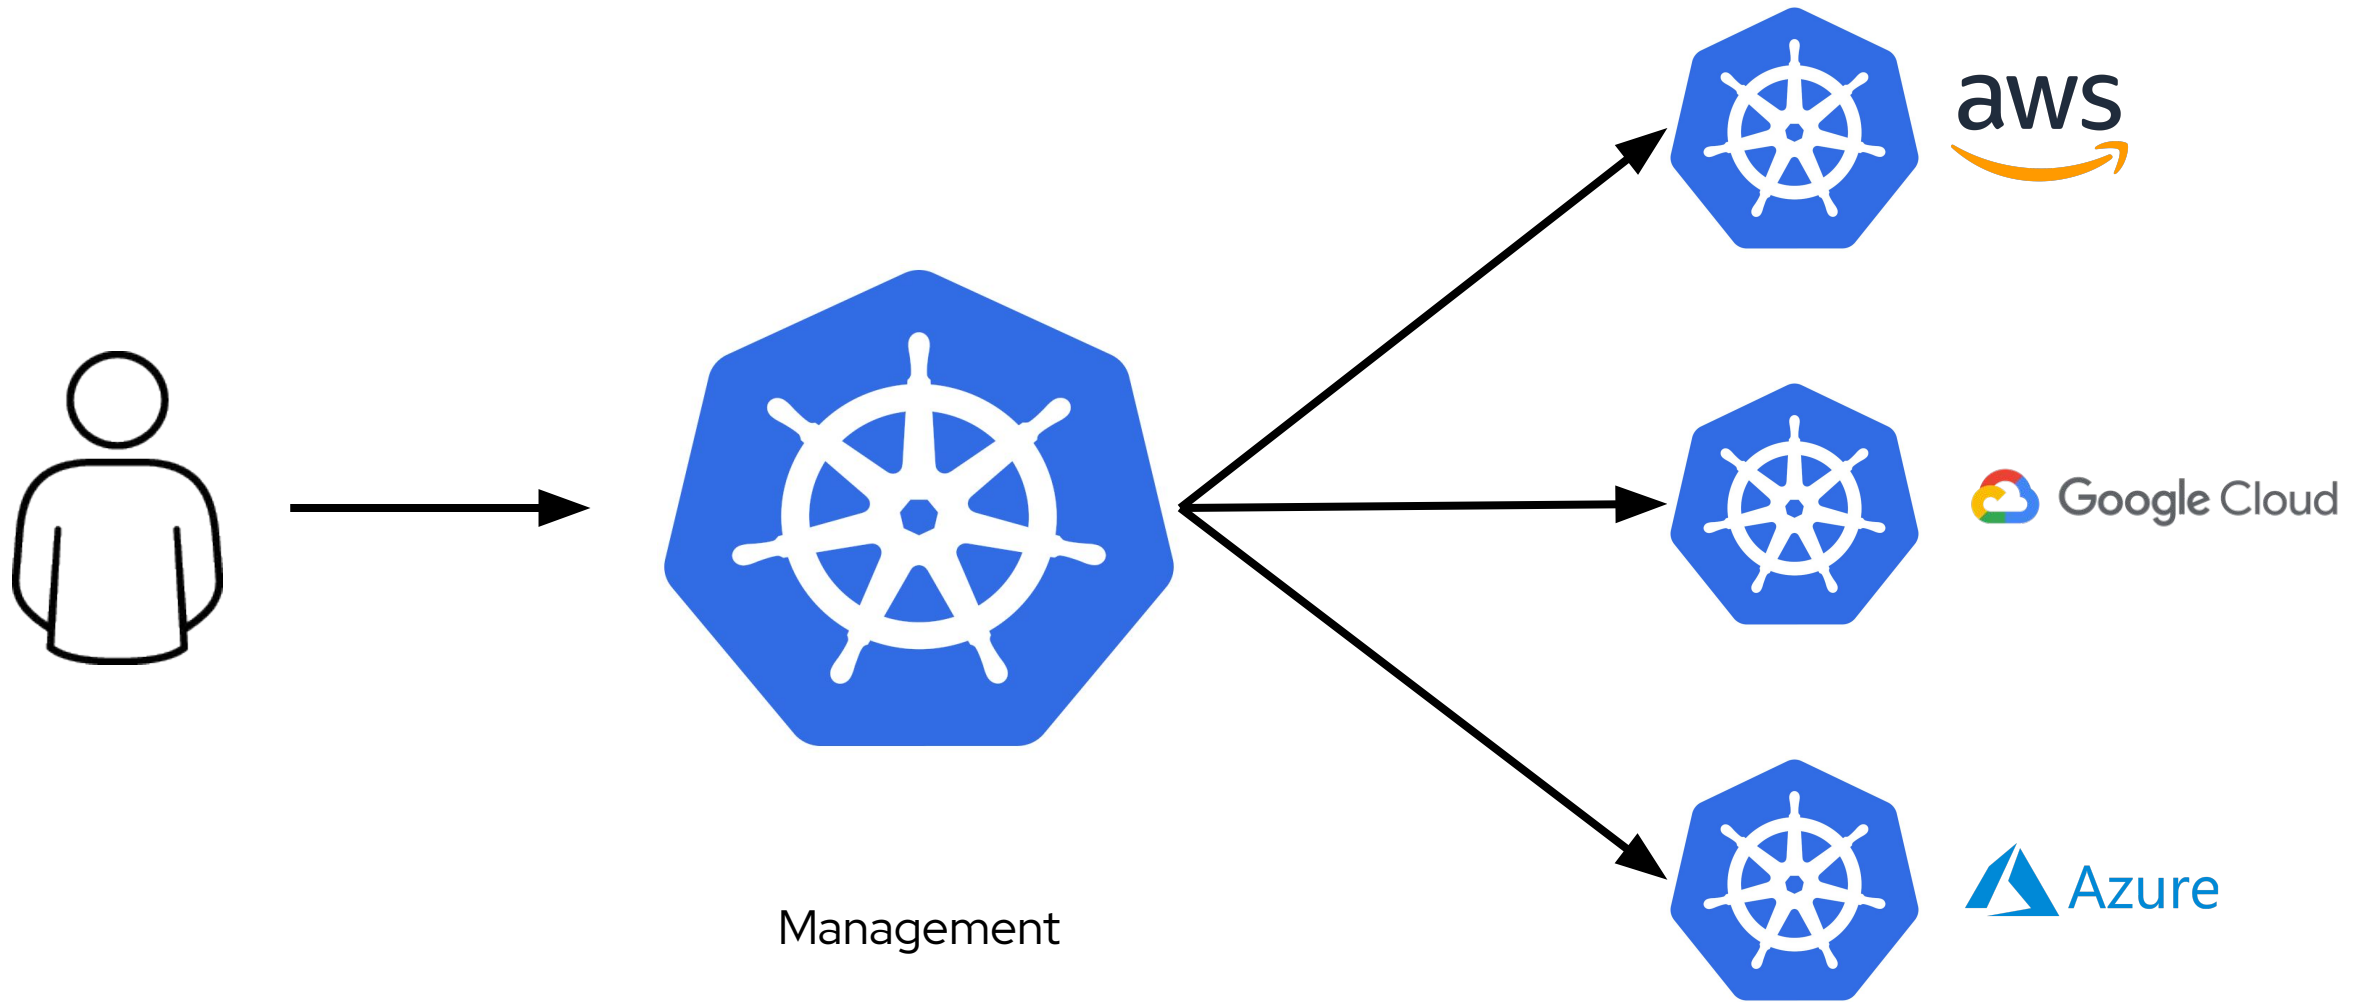

Cluster API is a Kubernetes sub-project focused on providing declarative APIs and tooling to simplify provisioning, upgrading, and operating multiple Kubernetes clusters.

What is CAPI?

Management

Beyond the basics

- ▶ Control plane management
- ▶ Machine health checking
- ▶ Cluster autoscaling
- ▶ Bootstrapping
- ▶ Spot instance usage
- ▶ 8 cloud providers

What do we need CAPI?

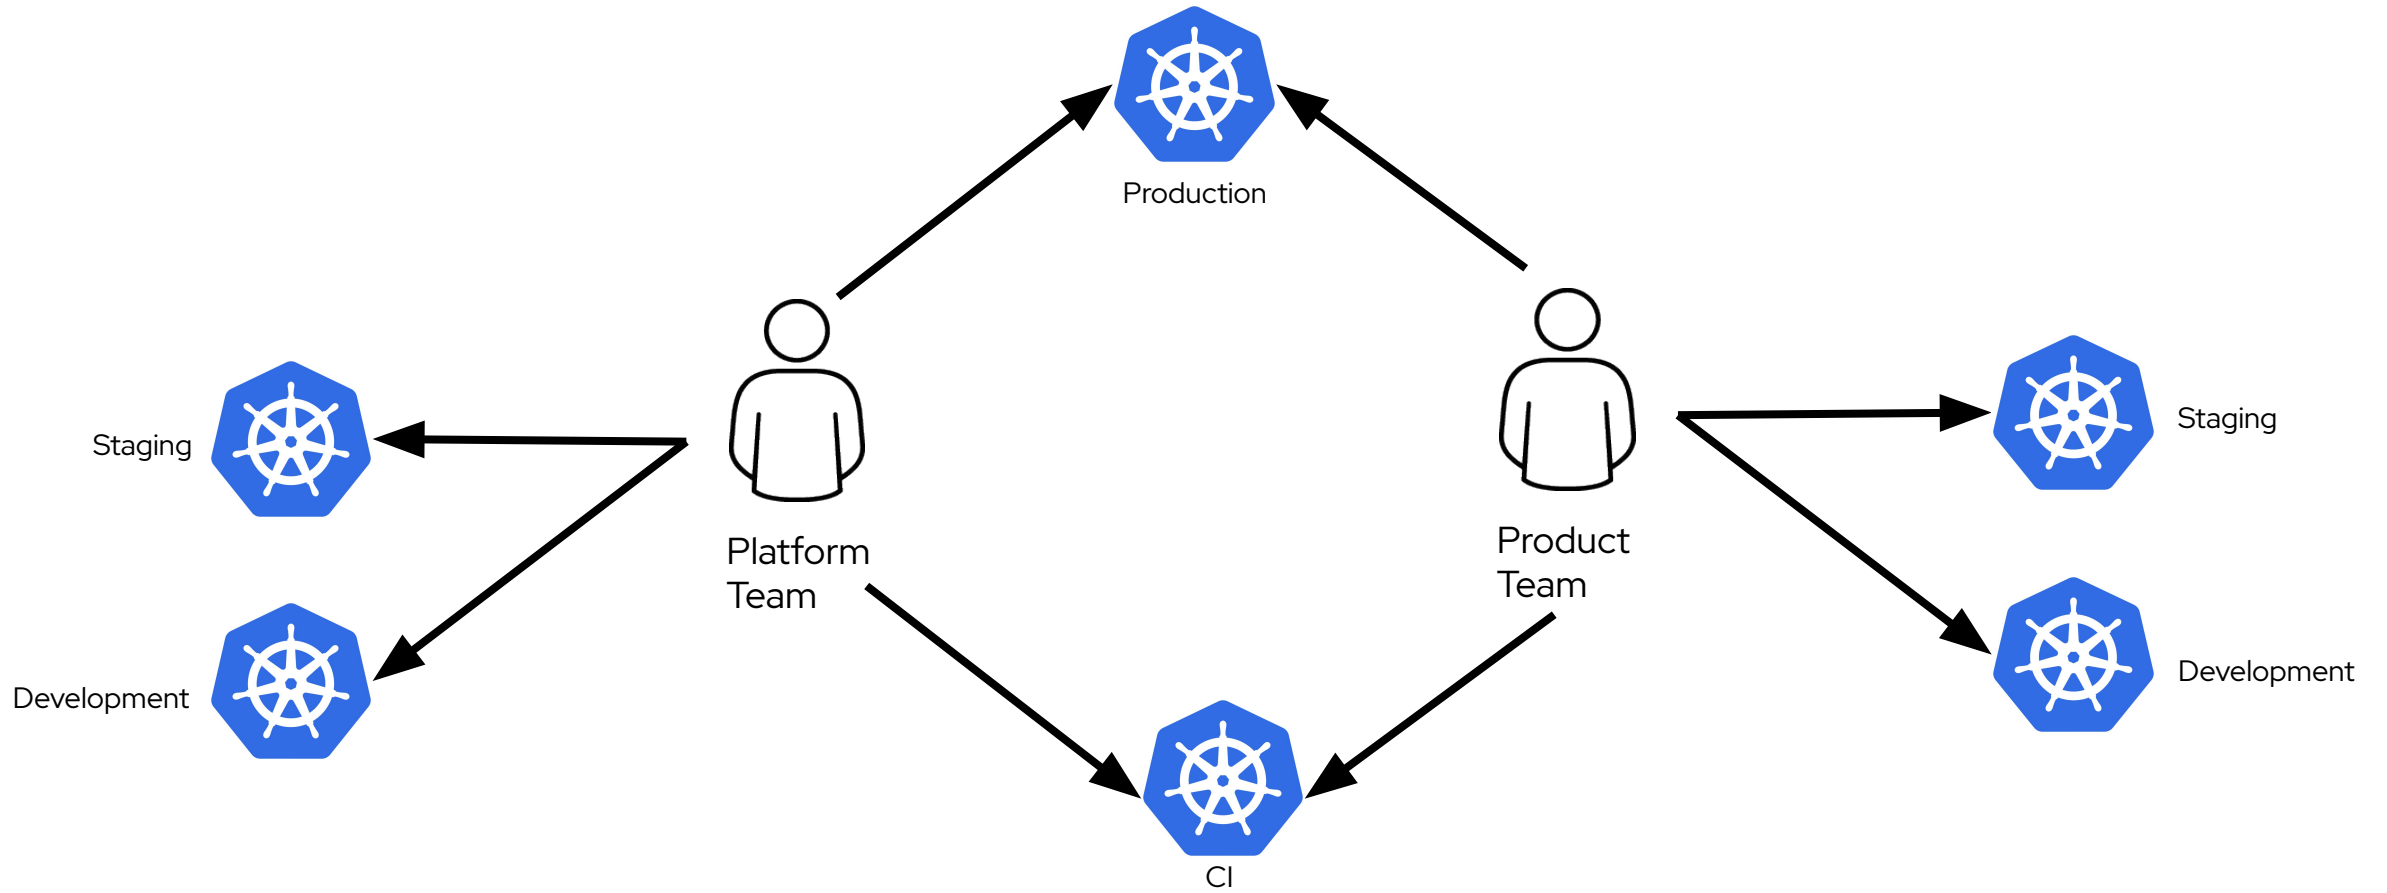

Why do we need CAPI?

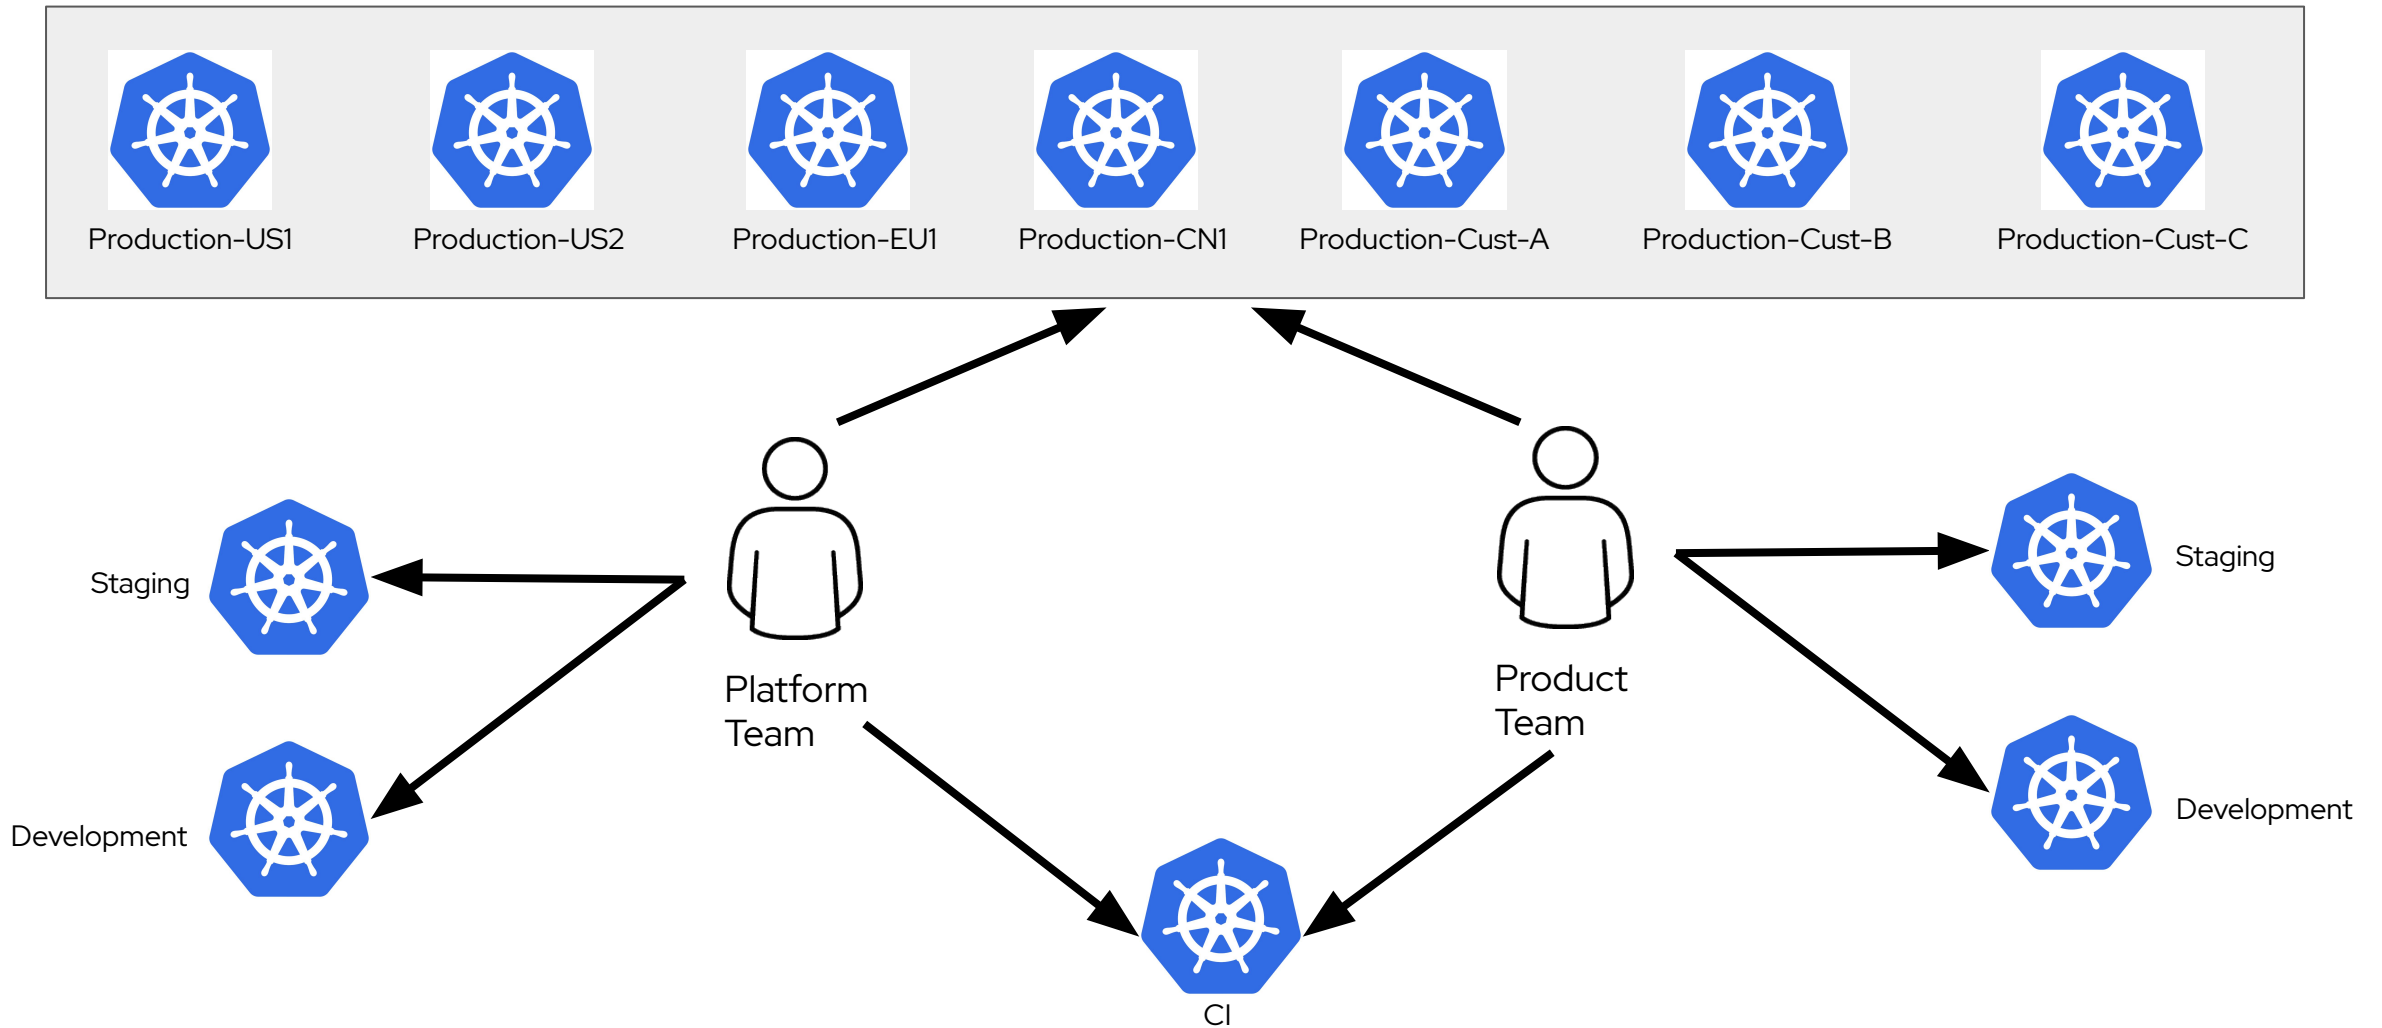

Why do we need CAPI?

Why do we need CAPI?

Why do we need CAPI?

How does CAPI help?

- ▶ Centralises Management
- ▶ Automated Provisioning
- ▶ Automated Remediation
- ▶ Automated Upgrades (for workers)

CAPI Anatomy

Core CAPI resources

Optional subheading

Cluster

Acts as a parent for other resources.

MachineDeployment

Creates MachineSets and updates them as needed.

MachineSet

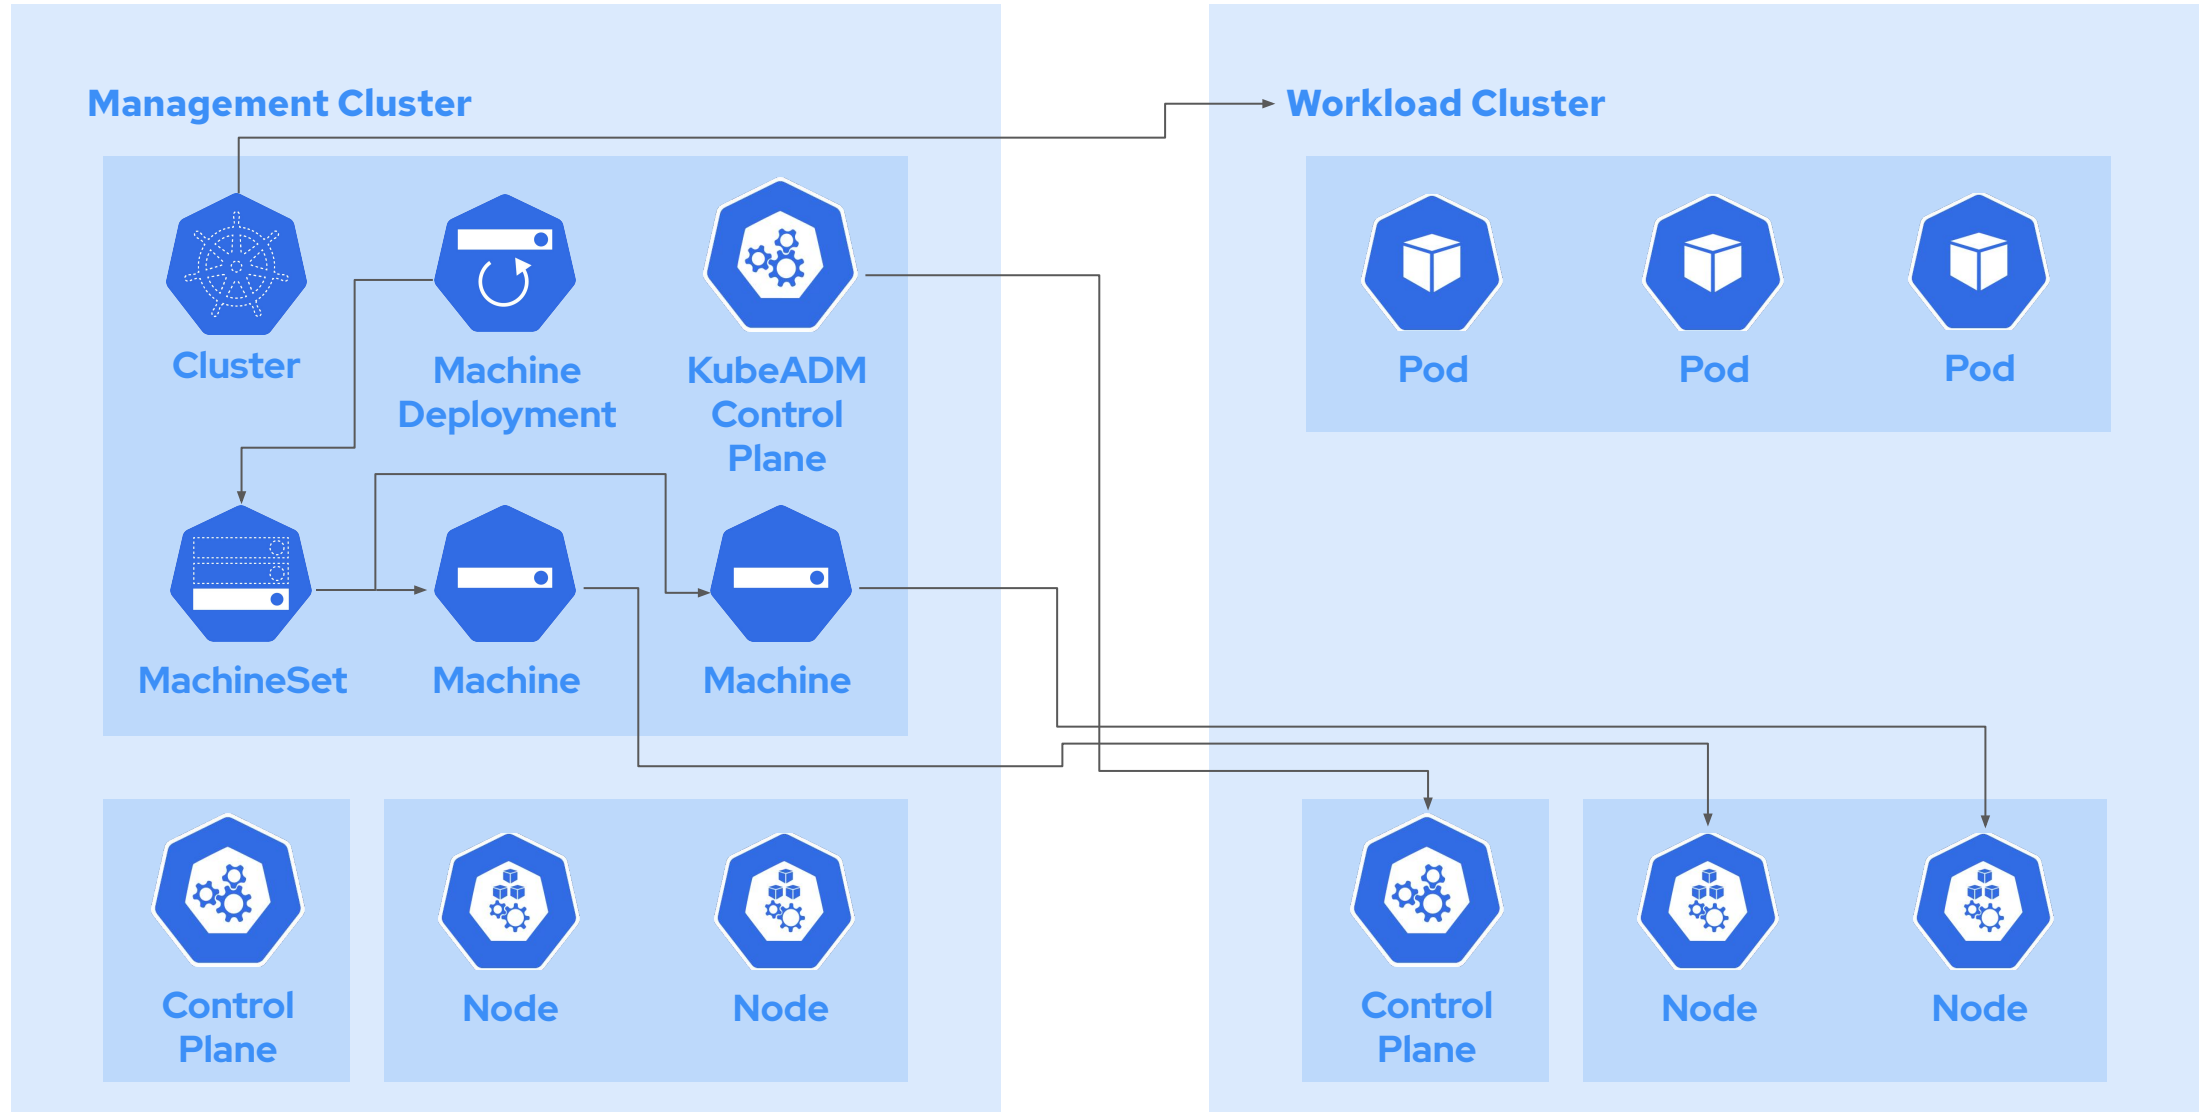

Ensures the desired number of Machines.

Machine

Creates a virtual Machine.

CAPI Controllers

Cluster API Controllers

Set of controllers responsible for core Cluster API responsibilities.

Provider Controllers

Responsible for interacting with cloud providers to manage VM instances and supporting services.

Bootstrap Provider

Responsible for providing configuration for VMs to enable them to join the cluster.

Control Plane Controller

Responsible for creating and managing a control-plane, eg configuring etcd.

```
apiVersion: cluster.x-k8s.io/v1alpha3
kind: Cluster
metadata:
  name: capi-demo-1
spec:
  clusterNetwork:
    pods:
      cidrBlocks:
        - 192.168.0.0/16
  controlPlaneRef:
    apiVersion: controlplane.cluster.x-k8s.io/v1alpha3
    kind: KubeadmControlPlane
    name: capi-demo-1-control-plane
  infrastructureRef:
    apiVersion: infrastructure.cluster.x-k8s.io/v1alpha3
    kind: AWSCluster
    name: capi-demo-1
```

Cluster

```
apiVersion: infrastructure.cluster.x-k8s.io/v1alpha3
kind: AWSCluster
metadata:
  name: capi-demo-1
spec:
  region: us-east-1
  sshKeyName: capi-demo-ssh-key
```

InfrastructureCluster

```
apiVersion: controlplane.cluster.x-k8s.io/v1alpha3
kind: KubeadmControlPlane
metadata:
  name: capi-demo-1-control-plane
spec:
  infrastructureTemplate:
    apiVersion: infrastructure.cluster.x-k8s.io/v1alpha3
    kind: AWSMachineTemplate
    name: capi-demo-1-control-plane
  kubeadmConfigSpec:
    clusterConfiguration:
      ...
    initConfiguration:
      ...
    joinConfiguration:
      ...
  replicas: 3
  version: 1.18.2
```

ControlPlane

```

          cloud-provider: aws
        name: '{{ ds.meta_data.local_hostname }}'
```

BootstrapConfigTemplate

CAPi In Action (Demo)

How to get involved?

Read the book, try it out!

<https://cluster-api.sigs.k8s.io/>

see the Quick Start section to launch your own clusters, with or without a cloud provider.

Discuss your issues!

#cluster-api

kubernetes.slack.com

see the Cluster API book for links to the group
mailing list

Attend a meeting!

Wednesdays @ 17:00 UTC

<https://zoom.us/j/861487554>

see the Cluster API book for recordings, notes, and updated information

Propose a change!

on github

kubernetes-sigs/cluster-api*

<https://github.com/kubernetes-sigs/cluster-api>

CAPI Roadmap

- ▶ Beta API version
- ▶ Increased testing
- ▶ CLI tooling improvements (clusterctl)
- ▶ Kubernetes API refactoring
- ▶ Bootstrap failure detection
- ▶ Pluggable load balancers

Thank You

Cluster API Book

<https://cluster-api.sigs.k8s.io>

Cluster API Project
